A. R. Conrad, W. M. Keck Observatory (WMKO); W. J. Merline, Southwest Research Institute (SwRI); J. D. Drummond, Starfire Optical Range, Air Force Research Laboratory, Kirtland Air Force Base; P. M. Tamblyn, Binary Astronomy, Dillon, CO, and SwRI; C. Dumas, European Southern Observatory (ESO), Chile; B. X. Carry, ESO; R. D. Campbell and R. W. Goodrich, WMKO; W. M. Owen, Jet Propulsion Laboratory; and C. R. Chapman, SwRI, report the discovery on Mar. 28.5 UT of a satellite of minor planet (41) Daphne from more than $100 J^{-}, H-, K-$, and $K^{\prime}$-band images with the $10-\mathrm{m}$ Keck II telescope (+ NIRC2/AO adaptive-optics system) on Mauna Kea. On Mar. 28.5032, the satellite was at separation $0^{\prime \prime} .56$ (projected separation 443 km ) and position angle $277^{\circ}$. The satellite was observed to be moving with the primary, as they traveled $80^{\prime \prime}$ across the background sky over the 3 hours. The significant ( $0^{\prime \prime} .3$ ) orbital motion of the satellite observed during this time implies an orbital period near 1.6 days. The $H$-band brightness ratio is estimated at $\sim 10 \mathrm{mag}$, giving an estimated diameter of the satellite of $<2 \mathrm{~km}$; if so, this system has the most extreme size ratio known (cf. EMP 2008, p. 256).

> COMETS 196P/TICHÝ AND 197P/LINEAR

Comet $\mathrm{P} / 2008 \mathrm{C} 2=2000 \mathrm{U} 6(c f . I A U C$ 8917) has been assigned the number 196P (cf. MPC 61921), and comet P/2008 E2 $=2003 \mathrm{KV}_{2}$ (cf. IAUCs 8924, 8925) has been assigned the number 197P (cf. MPC 62220).

## STEREO SPACECRAFT

Clarifying IAUC 8926, the two STEREO spacecraft will be $45^{\circ}$ from the earth in its orbit about two years after launch, and continue to drift away from the earth (ultimately passing each other behind the sun).

2008 March 31
